Divide-and-Conquer

Divide-and-conquer.

- Break up problem into several parts.
- Solve each part recursively.
- Combine solutions to sub-problems into overall solution.

Most common usage.

- Break up problem of size n into two equal parts of size $\frac{1}{2}$ n.
- Solve two parts recursively.
- Combine two solutions into overall solution in linear time.

Consequence.

- Brute force: n².
- Divide-and-conquer: n log n.

Divide et impera. Veni, vidi, vici. *- Julius Caesar*

5.1 Mergesort

Sorting

. . .

Sorting. Given n elements, rearrange in ascending order.

Obvious sorting applications. List files in a directory. Organize an MP3 library. List names in a phone book. Display Google PageRank results.

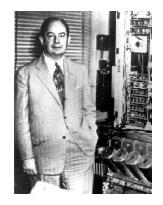

Problems become easier once sorted.

Find the median. Find the closest pair. Binary search in a database. Identify statistical outliers. Find duplicates in a mailing list. Non-obvious sorting applications. Data compression. Computer graphics. Interval scheduling. Computational biology. Minimum spanning tree. Supply chain management. Simulate a system of particles. Book recommendations on Amazon. Load balancing on a parallel computer.

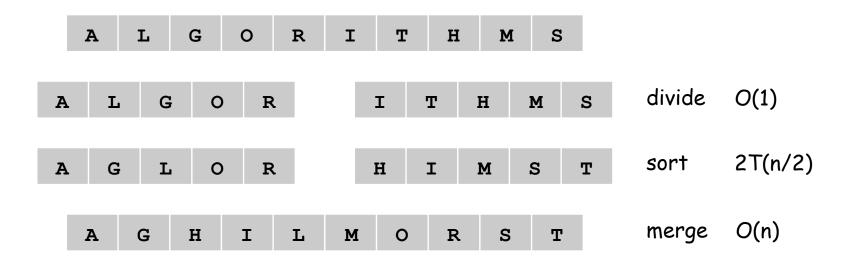

Mergesort

Mergesort.

- Divide array into two halves.
- Recursively sort each half.
- Merge two halves to make sorted whole.

Jon von Neumann (1945)

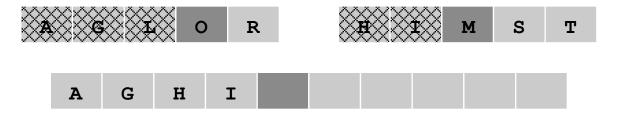

Merging

Merging. Combine two pre-sorted lists into a sorted whole.

How to merge efficiently?

- Linear number of comparisons.
- Use temporary array.

Challenge for the bored. In-place merge. [Kronrud, 1969] using only a constant amount of extra storage

A Useful Recurrence Relation

Def. T(n) = number of comparisons to mergesort an input of size n.

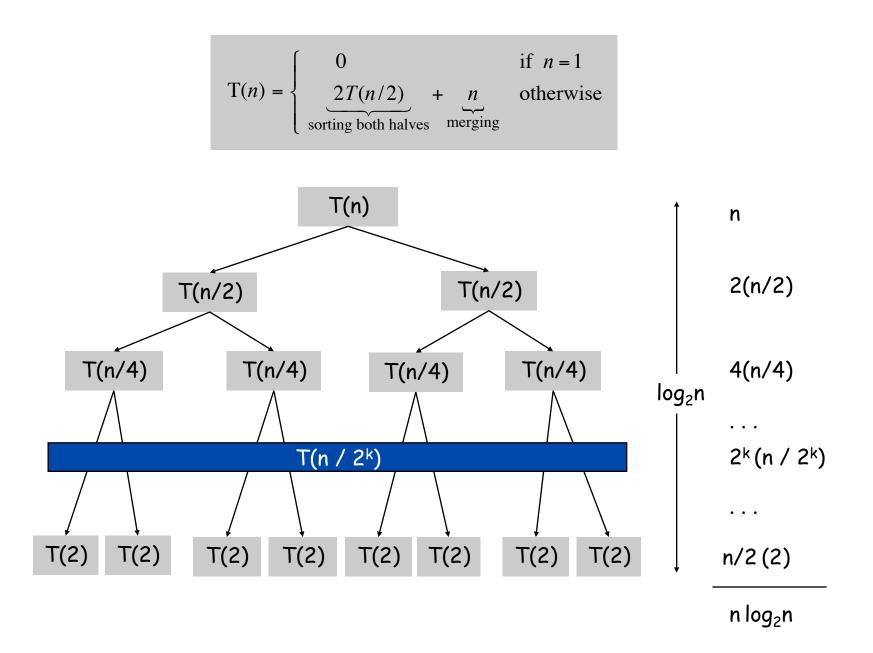

Mergesort recurrence.

$$T(n) \leq \begin{cases} 0 & \text{if } n = 1\\ \underbrace{T(\lceil n/2 \rceil)}_{\text{solve left half}} + \underbrace{T(\lfloor n/2 \rfloor)}_{\text{solve right half}} + \underbrace{n}_{\text{merging}} & \text{otherwise} \end{cases}$$

Solution. $T(n) = O(n \log_2 n)$.

Assorted proofs. We describe several ways to prove this recurrence. Initially we assume n is a power of 2 and replace \leq with =.

Proof by Recursion Tree

Proof by Telescoping

Claim. If T(n) satisfies this recurrence, then $T(n) = n \log_2 n$.

assumes n is a power of 2

t

$$T(n) = \begin{cases} 0 & \text{if } n = 1\\ \underline{2T(n/2)} + \underline{n} & \text{otherwise} \\ \text{sorting both halves merging} \end{cases}$$

Pf. For n > 1:

$$\frac{T(n)}{n} = \frac{2T(n/2)}{n} + 1$$

$$= \frac{T(n/2)}{n/2} + 1$$

$$= \frac{T(n/4)}{n/4} + 1 + 1$$

$$\dots$$

$$= \frac{T(n/n)}{n/n} + \underbrace{1 + \dots + 1}_{\log_2 n}$$

$$= \log_2 n$$

Claim. If T(n) satisfies this recurrence, then $T(n) = n \log_2 n$.

assumes n is a power of 2

$$T(n) = \begin{cases} 0 & \text{if } n = 1\\ \underbrace{2T(n/2)}_{\text{sorting both halves merging}} + \underbrace{n}_{\text{merging}} & \text{otherwise} \end{cases}$$

Pf. (by induction on n)

- Base case: n = 1.
- Inductive hypothesis: $T(n) = n \log_2 n$.
- Goal: show that $T(2n) = 2n \log_2 (2n)$.

$$T(2n) = 2T(n) + 2n$$

= $2n \log_2 n + 2n$
= $2n (\log_2(2n) - 1) + 2n$
= $2n \log_2(2n)$

Analysis of Mergesort Recurrence

Claim. If T(n) satisfies the following recurrence, then $T(n) \le n \lceil \lg n \rceil$.

$$T(n) \leq \begin{cases} 0 & \text{if } n = 1\\ \underbrace{T(\lceil n/2 \rceil)}_{\text{solve left half}} + \underbrace{T(\lfloor n/2 \rfloor)}_{\text{solve right half}} + \underbrace{n}_{\text{merging}} & \text{otherwise} \end{cases}$$

Pf. (by induction on n)

- Base case: n = 1.
- Define $n_1 = \lfloor n / 2 \rfloor$, $n_2 = \lceil n / 2 \rceil$.
- Induction step: assume true for 1, 2, ... , n-1.

$$T(n) \leq T(n_1) + T(n_2) + n$$

$$\leq n_1 \lceil \lg n_1 \rceil + n_2 \lceil \lg n_2 \rceil + n$$

$$\leq n_1 \lceil \lg n_2 \rceil + n_2 \lceil \lg n_2 \rceil + n$$

$$= n \lceil \lg n_2 \rceil + n$$

$$\leq n(\lceil \lg n \rceil - 1) + n$$

$$= n \lceil \lg n \rceil$$

$$n_{2} = \lceil n/2 \rceil$$

$$\leq \lceil 2^{\lceil \lg n \rceil} / 2 \rceil$$

$$= 2^{\lceil \lg n \rceil} / 2$$

$$\Rightarrow \lg n_{2} \leq \lceil \lg n \rceil - 1$$

log₂n
